

Mode of action

Anti-coagulant rodenticide extremely effective even on rodents resistant to other anti-coagulants. Acts after ingestion.

Directions for use

Pests controlled : Mice and rats of any species

Properties : **Rodexion Grain** is a ready-to-use rodenticide. It kills mice and rats in a few days causing them an internal haemorrhage, therefore the rodents feel choking and in their search for air they tend to go and die outdoors.

Usage instructions : Carry out an inspection in the place to be treated. Place **Rodexion Grain** in small heaps of at least 20-40 grams close to or, if possible, inside the places infested by rats and mice, on their tracks, in corners, never in the middle of the premises. In premises with beams and in attics, also place the small heaps on high corners between the beams and the ceiling. Check **Rodexion Grain** heaps every two to three days and complete them or renew if they have been eaten (this happens after a few days normally). If dead mice or rats are found, bury or burn them without touching them barehanded.

Warning

This product is toxic to fish, birds and other wildlife. Do not apply this product directly to water. Place grains in bait dispensing boxes or in other devices that protect the baits and discourage consumption by non-target animals.

RODEXION GRAIN RODENTICIDE

Active ingredient : 0.05 g/kg Bromadiolone
Chemical group : Hydroxycoumarin derivative

POISON

W.H.O. CLASS I

Toxicity of active ingredient

Acute oral LD50 (rat) : 1.125 mg/kg

Acute dermal LD50 (rat) : 1.71 mg/kg

Antidote : Vitamin K1 (15-25g)

Note to physician : Do not induce vomiting.

Administer activated vegetable carbon (25-100 mg)
and consult a physician
